The training material should include but not be limited to the following:

	Session Topic	Session sub topics
Session 1 - Theoretical	Introduction to	-Identifying and understanding the various climate-related risks
	Climate Change and	affecting farmers in the local context.
	Agriculture	-Analyzing the impact of changing weather patterns on crop
		yields and agricultural practices.
	Introduction to	-Importance of efficient water management in agriculture.
	Water Management	-Introduction to soil-plant-climate-water relationships.
	Irrigation Methods	-Overview of different irrigation methods (surface, subsurface,
		drip, sprinkler, etc.).
		-Advantages and disadvantages of each irrigation type.
		-Matching irrigation methods to soil types.
	Crop Water	-Understanding the water needs of different crops.
	Requirements	
Session 2 – Theoretical	Water Management	-Drip irrigation design and calculation.
	Techniques	-Rainwater harvesting and conservation.
	Climate-Smart	-Integrating climate-smart agriculture techniques.
	Farming Practices	
	Practical Exercise	-Provide farm scenarios with specific crops and soil types. Task
		participants with creating a detailed irrigation plan considering
		the farm layout and irrigation needs of each crop.
Session 3 – Theoretical	Soil Health and	-Implementing soil conservation practices (cover crops, tillage
	Moisture	and non-tillage, and mulching for moisture retention).
	Conservation	
	Resource-Efficient	-Efficient use of resources (water, fertilizers, etc.).
	Farming	Introduction to fertigation (integrating fertilization with irrigation).
	Adaptive	<ul><li>-Practical implementation and equipment used in fertigation.</li><li>-Developing adaptive strategies for changing climate conditions.</li></ul>
	Management	-Beveloping adaptive strategies for changing cumate conditionsEarly warning systems for extreme weather events.
	Strategies	-Larty warning systems for extreme weather events.
	Practical Exercise	-Present participants with different climate scenarios. Have
	Tradition Exercise	them develop adaptive management strategies tailored to each
		scenario.
Session 4 – Practical		The practical session will be conducted at one of the farmer
		plots. The practical session aims to reinforce theoretical
	Practical Session	knowledge, facilitate hands-on application of acquired skills
	1 10011001 30331011	from the theoretical sessions and guide participants through the
		applications, installation and maintenance of a drip irrigation
		system.
