Request for Proposal No.: RFP/BEY/22/04 Trainer on Data Analysis with R

Dear Sir/Madam:

Some of the Danish Refugee Council's interventions are designed to improve protection and effectiveness of the humanitarian response in Lebanon by enhanced coordination through joint analysis, planning and response. DRC Lebanon has developed a beneficiary centric integrated system for three main sectors Protection, Economic Recovery, and MEAL along with humanitarian common platform to manage referrals between partners in Lebanon. The Referral Information Management System "RIMS" has the capacity to generate two categories of valuable data that can be used to improve humanitarian response: 1) information on the effectiveness and timeliness of referral processes and 2) gaps in service provision across sectors. To that end, DRC will analyze aggregated information from RIMS partners to produce analysis on relevant trends and gaps. In relation to trends, for example, RIMS can support the identification of bottlenecks at each step of the referral process and DRC can present this data at inter-agency meetings to discuss potential ways to address them. Additionally, RIMS can support analysis of gaps, for example, by cross-referencing needed services against those actually received, and incorporating gender, age, Nationality; time and sector variables into the analysis, DRC will have the capacity to capture relevant trends and gaps in service provision.

Also, RIMS has the capacity to link to other online platforms through API.

DRC is seeking to appoint a **Trainer on Data Analysis with R** for the following:

The R Data Analysis Trainer will train DRC technical team on analyzing data, linking R to QGIS, linking R to postgreSQL database, linking R to PoweBi and also to train the team on Shiny R. DRC Lebanon has variety of tools and systems which are:

- ALPHA and RIMS are developed using ASP.NET core web application hosted on Azure Ubuntu server, and linked to PostgreSQL database.
- DRC has an internal ODK Aggregate server installed on Azure Ubuntu server to collect data offline and linked to a PostgreSQL database. Staff uses ENKETO links or ODK Collect mobile application to collect data.
- Additionally, DRC Lebanon programme teams use online (stored on sharepoing and google drive) and offline excel files to store information

Specifically, DRC technical team have to be trained during the training on the below:

The different data structures, such as atomic vectors, lists, data frames, and tibbles. How to create and use them.
