1. Are the companies registered in the EU accepted? *YES, no restrictions of company origin*
2. Can you inform us which technologies are used for the tools needing to be assessed?

   MERA : Android Java , SQLite , MVVM

   Sa7atouna : Flutter, SQLite, Firebase (for Notification)

   IDE: Android Studio for both (Flutter and Java)

   PHENICS: MVC, C#, Backbone.js, jQuery, Java, Bootstrap, Telerik

3. Do the tools we are supposed to assess have an interface in English? *All interface is in ARABIC, that is why experts need to know ARABIC or at least have someone on the team fluent in Arabic*
4. Do you know whether communication and documentation handed in English are valid?

   I am not sure I understood the question. All reports and deliverables need to be in English

Full mobile application assessment along the following criteria:
o Cross site scripting (XSS) protection
o Cross site request forgery (CSRF) protection
o SQL injection protection
o Clickjacking protection
o SSL/HTTPS
o Host header validation
o Referrer policy
o Session security

is only for the mobile application of the ministry of public health located on Google and Apple application store . *There are several application and all are on Google and Apple stores*

Can we participate in this RFP as we have English Proficiency only? *That will be extremely challenging since the interface is in Arabic*
